

ARE YOU PREPARED FOR THE

NEW FOOTBALL SAFETY STANDARD?

BS EN 16579

Our entire range of 100mm and 80mm aluminium and steel goals have been updated to conform with the new BS EN 16579 standard, giving you absolute peace of mind when you buy from MH Goals.

Sports equipment safety is absolutely paramount and is something that is very close to our hearts at MH Goals. MD Mark Harrod has been leading this field for many years and is recognised as an independent expert by the British Standards Institute (BSI) where he consults on both British and European sports equipment safety standards including BS EN 16579. In fact he is one of only a handful of these experts worldwide, which once again puts MH Goals at the very forefront of the sports equipment industry.

THE CHANGES INCLUDE:

Reducing the chance of finger entrapment by reducing the width of the moulded net hook channel

Reducing the standard net mesh size from 120mm to 100mm to reduce the risk of head entrapment

Introducing a new range of medium weight goals that have an overall weight of less than 42kg. This includes for the first time a full sized goal that meets this weight limit

Allowing goals to be installed using the Ground Screw system

The new BS EN 16579 standard comes into effect in late 2017 and covers all football goals from 24x8ft (7.32 x 2.44m) medium weight downwards, and supersedes BS 8462:2012.

The current BS EN 748 standard is still relevant for standard 24x8ft (7.32 x 2.44m) football goals.
