GMS

specialise in grass cutting and sports pitch maintenance with a wide array of machinery and trained staff to suit all maintenance needs. We have been maintaining playing fields and sports pitches for 18 years and are confident we can help improve your playing surface.

Our range of services includes:

- Grass Cutting
- Solid and Hollow Tine Aeration
- Slitting
- Weed Control
- Fertilising
- Over Seeding
- Scarifying
- Top Dressing
- 3g and 2g Synthetic Turf Maintenance

GRASS CUTTING - The larger areas of grass that we look after are cut with 6m wide Trimax Pegasus mowers. The mowers have front and rear rollers leaving a very professional finish. We have a range of smaller mowers for smaller areas.

WEED CONTROL

We have fully competent and trained staff who can apply a selection of herbicides to control broad leaved weeds and clover. Our operators have PA1, PA2 and PA6 qualifications.

VERTI DRAINING
The use of the Wiedenmann Terra Spike is a cultivation method that breaks down soil compaction and helps aerate the soil. The tines are driven into the ground, similar to a groundsman using a fork and heave the soil, cracking the compaction. This will help drainage and root expansion.

OVER SEEDING
Our Wiedenmann Terra Seeder is a precision over seeding unit that will help maximise seed germination and deliver uniform looking turf.

FERTILISING
Regular fertiliser application will help with grass growth and root development, improving the quality of the grass sward. We use an Amazon 300 spreader with a fully computerised system for accurate and efficient coverage.

TERRA CLEAN

The Terra Clean removes litter and debris while returning infill, in a clean state, to the pitch to be reused. This machine that is undertaken the deep clean that is required on a regular basis to keep 2g and 3g pitches in optimum playing condition.

SYNTHETIC PITCH MAINTENANCE

The Terra brush is the ideal way to keep on top of your weekly 3g and 2g brushing regime with the Terra Rake complementing this with deeper pile agitation.

PITCH MARKING

We operate a dedicated pitch marking team, utilising the latest Fleet Line Markers BeamRider laser guided pitch marking system for quick and accurate setting out of grass sports pitches, synthetic surfaces and hard court surfaces. Our team are experts in setting out and over marking an array of pitches including football, rugby and athletic running tracks.

SCARIFYING

The Terra Rake can be used for the quick and efficient removal of thatch. Its wide robust frame has five rows of spring tines arranged in a parallelogram shape. It is also very efficient for decompaction control on synthetic 3g and 2g pitches.
