COMMERCIAL TURF

JOHN DEERE 1026 COMPACT TRACTOR

Excellent manoeuvrability and are easy to operate.
They offer perfect stability and ride comfort and as they are compact they are easy to park and store. Standard features include hydrostatic transmission, 4 wheel-drive and power steering for smooth operation plus a deluxe seat and suspension, tilt steering and deluxe lighting kit for all-day productivity. The 1026 compact tractors are designed for power & productivity without making compromises on quality, versatility and cost-efficiency.

TRIMAX STRIKER 150

Designed to work with light-weight compact tractors like the 1026 and is able to mow quickly at a high standard making it extremely efficient in terms of fuel and time. This multi-spindled rotary mower has four carefully positioned grease points and robust spindles making it incredibly low maintenance. Striker 150 has Trimax LazerBladez™ fitted as standard for improved grass distribution and reduced clumping. The full-width front-and-rear rollers produce an attractive striped pattern and guard against scalping for a consistent finish. Variable height adjustment and the ability to withstand tough conditions allow for year round mowing. Exceeding international safety standards with the added benefit of an enclosed cutting chamber means added safety for you and your team.

GREENTEK AERO-QUICK

The versatile Aero-Quick weighs only 240kg, making it light enough for a 20HP compact tractor to handle. Yet with a full 5' (1.5m) working width, it will also cover the tracks of most tractors up to 35HP. Compaction from regular play closes up air spaces in the ground until the turf can neither breathe nor drain. Unless you relieve this compaction by regular aeration, the soil becomes stagnant and your turf will die. The GreenTek Aero-Quick Opens up the soils structure and improves drainage which encourage stronger turf growth. A wide range of different attachments is available to suit varying surfaces from golf greens to football pitches, and a built-in weight tray allows you to add further ballast for maximum penetration.
