

Get started with Joymo Share

Joymo's iOS/android application for livestreaming all sport through your phone or tablet.

How does it work?

Download the app

Schedule your
livestream in Joymo
Arena

You can find the
event in the app 24
hours before it is
scheduled to start

Things to consider

- The application is compatible with iOS version 13 or newer, as well as Android 7 or newer.

Data-usage per hour:

1080p = 2070 MB
720p = 1575 MB
420p = 675 MB
320 = 450 MB

Please ensure the upload speed of your internet is minimum:

1080p = 5Mb/s
720p = 4Mb/s
420p = 2Mb/s
320p = 1.5Mb/s

- Make sure you have enough power on your device for the duration of the stream.
- We highly recommend using a tripod when filming to avoid shaky streams.
- Unless you are commenting on the sport event you are streaming, try to minimize talking. Sound is recorded too!
- Avoid filming against the sun (if outside) and see if you can find a good spot a bit higher up to capture the field of play.
- When streaming through your phone, "Do not disturb" should be activated
